

Waxflower is Australia's major native flower crop and also it's largest export flower crop with key overseas markets in Japan, the United States, the Netherlands, Canada and South-East Asia.

Exciting developments waxflower breeding and

Up until the late 1990s Australia dominated southern hemisphere waxflower production in the June to December supply window. However, in recent years there has been increased waxflower production from countries such as Peru and South Africa. These countries are typically producing older varieties of waxflower with lower costs of production.

Waxflower research project

For Australia to maintain and grow market share it needs to remain at the forefront of Waxflower breeding and new variety development. With this market driven objective in mind the Rural Industries Research and Development Corporation (R.I.R.D.C.) is pleased to announce an exciting new waxflower research project partnering with WAFEX and the Botanic

Garden and Parks Authority, based at Kings Park in Western Australia (B.G.P.A.) .

Somatic fusion

Alison Saunders, senior research manager, Wildflower and Native Plants Program, R.I.R.D.C said development of new and exciting wildflower varieties is essential for Australia to maintain it's competitive edge in the global flower industry.

"This innovative project featuring the technique of somatic fusion within the Chamelaucium alliance will be led by Digby Grows at King's Park who will develop new technologies to fast track production of new varieties that may have never been thought possible before", said Saunders.

Saunders added, "R.I.R.D.C welcomes WAFEX's generous financial contribution to this project which

we hope will produce a stable of new varieties and at the same time develop technology which will be made available to breeders across the Australian wildflower industry and may be applicable to other commercial wildflower crops." Digby Grows, senior plant breeder at the B.G.P.A said the somatic fusion techniques being developed in this project will allow crossing of closely related genera such as Chamelaucium, Verticordia and Darwinia. Digby Grows explained, "Verticordia and Darwinia are typically not commercial cut flower genera but they possess some exciting attributes which we want to try and introduce into the Chamelaucium genus." He continued, "Some of these desirable attributes include red flowers, coloured bracts and extended flowering periods", he said

Department of Agriculture and Food

PRODUCT PROFILE - CODE: WA 56

This variety has provisional protection under the Plant Breeder's Rights Act 1993 (unauthorised commercial propagation or any sale, conditioning, export, import or moving of propagating material of this variety is an infringement under the Plant Breeder's Rights Act 1993)

Species: *Chamelaucium* Hybrid
Common Name: "Lambflower"

- Perennial early flowering (June to late July)
- Height: 0.9 m
- Spread: medium 1.2 - 1.5 m across
- Yield: high*
- Scent: mild
- Leaves are dark green - linear, acute
- Flowers white; pink to lavender - buds approximately 11 mm across

Summary:
This selection features a profuse display of creamy white flowers which after approximately two weeks develop a pink to magenta colour at maturity. This change in colour allows the flowers to be picked at a number of stages from white, pink and then pink to red which widens the marketing window*. Flower centres or capsules are light green. The deep green foliage contrasts the inflorescence to present an attractive display.

PRODUCT PROFILE - CODE: WA 74

This variety has provisional protection under the Plant Breeder's Rights Act 1993 (unauthorised commercial propagation or any sale, conditioning, export, import or moving of propagating material of this variety is an infringement under the Plant Breeder's Rights Act 1993)

Species: *Chamelaucium* Hybrid
Common Name: "Pearlflower"

- Perennial mid to late flowering (late August to September)
- Height: 0.9 m
- Spread: medium 1.2 - 1.8 m across
- Yield: high*
- Scent: mild
- Leaves are dark green - linear, acute
- Flowers 15-20 mm across with white petals and a yellow-green flower cup

Summary:
This selection features a profuse display of high yielding long vase life** creamy-white flowers. The flower centres or capsules are light green. The deep green foliage contrasts the inflorescence to present an attractive display. The foliage remains green and tends not to yellow**

PRODUCT PROFILE - CODE: WA 87

This variety has provisional protection under the Plant Breeder's Rights Act 1993 (unauthorised commercial propagation or any sale, conditioning, export, import or moving of propagating material of this variety is an infringement under the Plant Breeder's Rights Act 1993)

Species: *Chamelaucium* Hybrid
Common Name: "Pearlflower"

- Perennial very late flowering (September to early October)
- Height: 0.9 m
- Spread: medium 1.2 - 1.8 m across
- Yield: high*
- Scent: mild
- Leaves are dark green - linear, acute
- Flowers creamy white 15 mm across

Summary:
This selection features a profuse display of high yielding long vase life** creamy-white flowers. The flower centres or capsules are light green. The deep green foliage contrasts the inflorescence to present an attractive display. Flowers are late which extends the present Pearl flower flowering time by 2 to 3 weeks.

Innovator

Craig Musson, WAFEX managing director said WAFEX is thrilled to invest in the somatic fusion project with R.I.R.D.C and King's Park. "The Australian waxflower industry was built on being the innovator of new varieties such as 'Purple Pride', 'CWA' and 'Snowflake' in the 1980s, the Megapetalum hybrids in the 1990s and Pearlflower My Sweet Sixteen and Dancing Queen varieties around 2000", said Musson. Musson added, "Sadly in recent years there has been very little in the way of new releases coinciding with a drop in export sales of this crucial Australian export flower crop. This investment offers the hope of developing completely new varieties to once again position Australia as the leader in Waxflower breeding and innovation." III

W.A.A.A. announces marketing agreement

The Western Australian Agricultural Authority advertised for a Request for Proposal (R.F.P) with regards to the commercial development of waxflower cut flower varieties from their breeding program. On June 15 2011 it was announced that WAFEX was the successful applicant and WAFEX will be the exclusive licensee for the production and marketing of the initial three varieties designated for release: WX 56, WX 74 and WX 87.

As yet none of these three new varieties have been named, all of these varieties have provisional protection under the Plant Breeder's Rights Act 1994. The initial release will be restricted to Western Australian flower growers exclusively and WAFEX will coordinate the supply of propagation material and plants as well being the exclusive marketing agent for these varieties for distribution on both export and domestic cut flower markets.

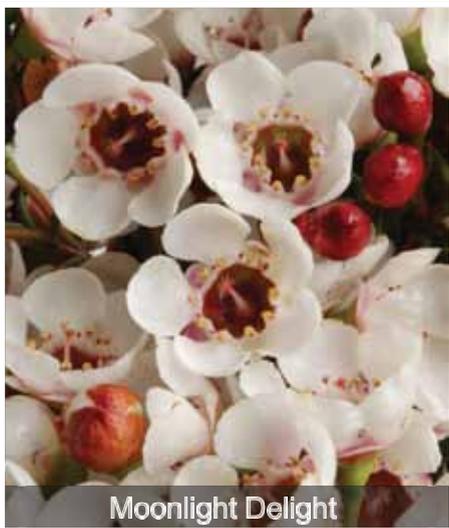

Craig Musson, WAFEX managing director said WAFEX looked forward to speeding up quick commercial release of these exciting new varieties to Western Australian flower growers. "The white Pearlflower varieties WX 74 and WX 87 have been selected for their mid to late flowering season which will extend White Pearl waxflower supply beyond the current last variety, 'Ivory Pearl' ", said Musson. Musson continued, "WX 56 is an exciting two toned pink variety with an attractive green centre and in recent years there has been a noticeable shortage of export quality Pink waxflower varieties. The two toned colour attributes of WX 56 also allow for a longer harvest and marketing window." All three varieties released by W.A.A.A have been extensively tested for production, stem length and vase life. NEW Australian Waxflowers

Helix Australia is a wholly Australian owned and operated business specialising in the breeding, marketing and licensing of new and improved Waxflower varieties. Since its inception in 2008 Helix Australia has put together an exciting range of new Waxflower varieties including:

**My Sweet Sixteen A,
Dancing Queen A,
Chantilly Lace,
Sarah's Delight A,
Moonlight Delight A,
Pearl Buttons A and
Raspberry Ripple A.**

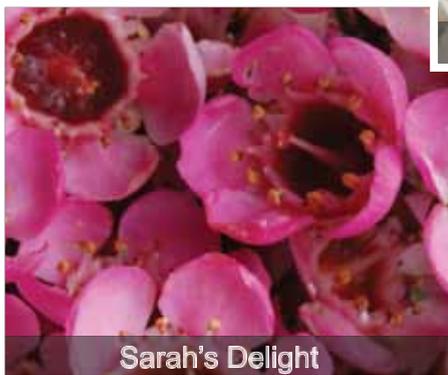

Moonlight Delight

**We are
Waxflower specialists & leaders**

**We have
New varieties available **NOW**
and more to come**

**Ideal flowering pot
or garden plant**

**Agent/distributor
enquiries welcome**
